PROFESSIONAL SUMMARY

Versatile Software Developer with expertise in game architecture and agentic AI integration. Proficient in the Godot Engine and OpenClaw framework, with a specialized focus on modular state management and automated system logic. Adept at bridging the gap between complex technical backends and intuitive user experiences through structured roadmapping and 2D isometric design.

TECHNICAL SKILLS

Languages: GDScript, Python, C++, JavaScript, C#

Engines & Frameworks: Godot Engine (2D/3D), OpenClaw AI Framework, React, Node.js

Tools & Platforms: GitHub/Git, Milanote (Project Architecture), Discord API, Docker

Technical Specialties: Agentic Reasoning, State Machine Logic, API Integration, Environment Configuration

Design: 2D Isometric Pixel Art, Sprite Optimization, UI/UX Flow Mapping

GAME DEVELOPMENT EXPERIENCE

Magic School Sim

April 2026 – Present

Lead Developer

- Architected a modular state management system in Godot using GDScript to handle complex transitions between gameplay scenes, ensuring seamless data persistence.
- Engineered a custom Student Progression System, implementing automated attendance timers and knowledge-level logic that scales based on user interaction.
- Designed and integrated 2D isometric pixel art assets, maintaining visual consistency and optimizing sprite rendering for peak performance.
- Streamlined the development lifecycle by utilizing Milanote for technical roadmapping, mechanics documentation, and architecture planning.

APPLICATION DEVELOPMENT EXPERIENCE

AI Agent & Bot Integration

April 2026 – Present

Application Developer

- Engineered a cross-platform interface for an automated AI agent using the OpenClaw framework, bridging the gap between local backend logic and external API gateways.
- Developed a specialized Discord application, implementing secure environment-driven configurations and token management for real-time user interaction.
- Optimized application uptime by diagnosing and resolving gateway startup errors and connectivity bottlenecks within the local runtime environment.
- Translated complex management mechanics into intuitive digital experiences, managing UI/UX flows and technical milestones within a structured project roadmap.

EDUCATION & CERTIFICATIONS

Focus on Software Engineering and Systems Architecture

- **Agentic AI Engineering Specialization** | Coursera (LangChain, LangGraph, Multi-agent systems)
- **Building AI Agents with OpenAI Specialization** | Coursera (Reasoning, tool calling, agent communication)
- **Generative AI for Everyone** | Coursera (AI project lifecycles and ethical automation)
